

Partner with the **AI layer** for the tools business already runs on.

A confidential invitation to sell, grow, and earn recurring revenue on a category that is only just beginning.

Prepared for	Document	Date	Status
Prospective Partner	Implementation Partner Brief	July 2026	Confidential

A venture of **iBAS Software FR** · Paris · Rouen · Manila

Two waves are cresting at once. Let's ride them together.

Dear Partner,

You already feel both of these in every client conversation. AI has stopped being a demo and become a line item: businesses want the hype turned into work done, a vendor bill posted, a candidate scored, a stalled deal saved. And Odoo has quietly become the fastest-growing ERP on earth, with millions of companies sitting on structured data that is begging for an AI layer on top.

Those two waves meet in one place: **AI agents that integrate with the software a company already runs and do the real operational work.** That is Sydekyks, a roster of AI sidekicks that connect to a company's systems and take over the tedious, expensive work no one wants to do by hand. We start with Odoo because we know it better than almost anyone, but it is the beginning, not the destination: the same engine will go after QuickBooks, Salesforce, Shopify, and every platform businesses run on.

Here is the honest part. **We cannot do everything, and we don't want to.** We are relentless about one thing: research and development, building the best AI agents in the ecosystem and keeping them there. The sales team in your city, the implementer who knows your client's chart of accounts, the advisor who picks up the phone in the local language, that is you.

So we're opening our **Implementation Partner** program to a small group of firms who already sell, deploy, and support Odoo. The economics are generous and **recurring**: commissions that climb to **40%** for the life of every account, plus the implementation, training, and support revenue you price and keep. It is early enough that founding partners help shape what we build next. In time the program will carry certification and formal requirements; for now we keep it open, and the bar will never be lower than today.

We built something worth putting your name next to. We'd like it to carry yours.

The Sydekyks Team

iBAS Software FR

Not a startup guessing at Odoo. An official partner who lives in it.

Sydekyks is the latest brainchild of **iBAS Software FR**. We didn't arrive at this category from the outside. We got here by implementing Odoo for real businesses, every day, for years.

CREDENTIAL

Official Odoo Partner

Certified partner in the Philippines with heavy, real-world references. We know this space inside and out.

MANDATE

Invited to build in France

iBAS began in the Philippines and was invited by a French government body to expand and invest in tech initiatives in France.

DOMAIN DEPTH

We speak Odoo natively

Every Sydekyk is designed by people who understand vendor bills, CRM pipelines, and recruitment records as they actually live in Odoo.

FOOTPRINT

Two continents, one team

A European presence and an established Asian engineering base, giving partners both proximity and scale.

WHERE WE ARE

Paris

FRANCE

Rouen

FRANCE

Manila

PHILIPPINES

Why this matters to you

You are not betting on a lab that has never filed a tax report. You are partnering with an operating Odoo partner that already carries client references, government backing, and offices on two continents, now turning that expertise into an AI product you can sell.

AI is booming. Odoo is booming. We sit in the overlap.

These aren't projections we invented to sell you. They're the market you already sell into every day.

WAVE ONE • ARTIFICIAL INTELLIGENCE

\$1.8T+

Projected global AI market by 2030, up from ~\$390B in 2025: roughly a 30% compound annual growth rate.

76%

of companies already use AI in at least one business function; 87% rank it a top business priority.

\$46B

The category we're in. Enterprise **agentic** AI by 2030, up from ~\$6.8B in 2025, a ~47% CAGR. Agents that do work, not chat.

\$15.7T

Estimated contribution of AI to global GDP by 2030. A once-in-a-generation shift, not a trend.

WAVE TWO • ODOO

16M+

Users across 170,000+ paying businesses, and growing by **13,000+ new customers every month**.

~40%

Fastest-growing ERP. Sustained year-over-year growth, outpacing SAP, Oracle and Microsoft Dynamics in the SME segment.

\$7B

Company valuation on ~\$550M+ ARR, targeting €1B in billings by 2027. This ecosystem is compounding.

\$13B

New spend flowing into **AI-inside-ERP** between 2025 and 2029 alone, at a ~27% CAGR.

The intersection is the opportunity.

An AI market racing toward trillions. An ERP ecosystem adding a mid-sized city of businesses every month. The value is created precisely where they overlap.

Practical AI agents that integrate with Odoo, sold and supported locally. Nobody owns this layer yet.

\$850,000,000

A conservative, serviceable market **within today's Odoo base alone**: 170,000+ businesses adopting even a modest AI operations layer at ~\$5,000/year. That base grows by 150,000+ businesses annually, so this is a floor, not a ceiling.

Sources: Grand View Research, Statista, MarketsandMarkets, Technavio (AI & agentic-AI sizing, 2025-2030); PwC (AI GDP contribution); Odoo S.A., GetLatka, Tracxn (Odoo users, growth, ARR & valuation). Figures rounded; the \$850M figure is illustrative math on Odoo's disclosed customer base.

Odoo is where we start, not where we stop.

The hard part of Sydekyks is not the Odoo connector. It is the engine underneath: agents that read messy real-world documents, reason about a business process, and act safely inside a system of record. That engine is deliberately built to be **platform-agnostic**.

Once it is proven in Odoo, we will move aggressively into the other platforms businesses live in. Every new platform we add multiplies the market you can sell into, using the same Sydekyks, the same brand, and the same partnership.

What this means for a partner

You are not signing up to resell one ERP add-on. You are getting in early on the AI layer for business software as a whole. The partners who build a book on Odoo now are the ones positioned to ride every platform we add next.

A shipping roster, and we're only getting started.

The nine Sydekyks below are live and working today, not slideware, a snapshot of the roster as of 18 July 2026. Each connects to the customer's Odoo, takes over a specific job, and reports the exact time and money it saved. They are only the opening lineup: the full roadmap is on the next page.

FINANCE & ACCOUNTS PAYABLE

Ledger Reads uploaded or emailed **supplier invoices** and creates draft vendor bills in Odoo (vendor, totals, taxes, line items, original attached). Auto-posts when confident. Kills manual AP data entry.

Mirror A **duplicate-bill watchdog**. Catches invoices entered twice, even across vendor records that share a Tax ID or bank account, before they get paid twice.

Shield An AP **fraud-risk detector**. Flags bank details changing right before payment, vendor accounts matching employees, and same-person entry-and-approval, then can hold payment for a human auditor.

SALES & CRM

Nudge Watches open **opportunities**, flags deals gone quiet, drafts a context-aware follow-up grounded in the last real conversation, and reminds the rep, giving managers a ranked value-at-risk queue.

Quill An AI **proposal & SOW writer**. Turns rough notes plus a template into a polished, ready-to-edit document grounded in real Odoo deal facts, refined conversationally and exported to PDF.

RECRUITING & HR

Decode Reads incoming **résumés** and turns each into a complete, structured applicant record in Odoo, matched to the right role, résumé attached, review flags raised. Zero data entry.

Scout An AI **résumé scorer**. Grades each applicant against the job's own requirements and writes a star rating plus a plain-language strengths and weaknesses note: an instant, consistent shortlist.

DOCUMENTS & CONTRACTS

Seal Drafts **contracts** from a template and brief, then runs a clause-by-clause risk review flagging uncapped liability, auto-renewal traps, and weak payment terms. Ships with NDA/MSA/SOW starters.

Signet An **e-signature** agent. Emails each signer a secure link, chases stragglers with timed reminders, and files the signed PDF back onto the right Odoo record. Pairs with Seal.

This is only the beginning.

Here is the part that should get your attention. What we have built is not nine hand-crafted apps, it is an **AI agent framework**. A new Sydekyk is a new specialist configured on a proven platform, so adding one is a matter of scaling, not inventing from scratch. We are shipping roughly **three to seven new Sydekyks every two weeks**, which is exactly why the count below is only a snapshot, current as of 18 July 2026. Partner interest is already strong, and we are closing the founding cohort accordingly.

9	33	42
live & working today	in the build queue	specialists on the roadmap

Each planned Sydekyk backs up a specific back-office role, across eight business areas:

FINANCE	Chase, Balance, Match, Audit, Beacon
RECRUITMENT	Echo, Launch, Verify, Pulse
SALES	Spark, Forecast, Coach, Reply
PURCHASING	Source, Comparex, Gauge, Renew
INVENTORY	Stocker, Sentinel, Locate, Cycle
MANUFACTURING	Vector, Prism, Delay, Predict
CRM & SUPPORT	Halo, Switch, Scribe, Mood
DATA QUALITY	Cleanse, Twin, Fixer, Guardian

What this means for you

Your product line compounds. You are not selling a fixed set of apps, you are selling an ever-growing bench of specialists into the same accounts. Every month there is something new to cross-sell, at no extra cost or effort to you, and every new agent deepens why a customer stays.

We do the hard technology. You own the relationship.

This works because neither side tries to do the other's job. Here is the clean line down the middle.

SYDEKYKS

We bring

- The full roster of AI Sydekyks, and a steady stream of new ones
- All research & development, model operations, and reliability
- The multi-tenant platform, hosting, and security
- Deep integrations, starting with Odoo and expanding outward
- Partner enablement: demos, materials, and technical backup
- Usage metering, billing infrastructure, and the customer dashboard

PARTNER

You bring

- Your market, your language, your trusted local relationships
- Sales: finding customers and closing them
- First-line support and account success
- Implementation know-how your clients already lean on
- Feedback from the field that shapes what we build next
- The reputation that makes a customer say yes

The result

You add a high-margin, recurring AI product to your existing client base, with none of the cost or risk of building and maintaining AI yourself. We get reach we could never build alone. Both sides do only what they're best at.

This isn't software. It's your next hire.

The right way to price a Sydekyk is not against other apps. It is against the person your customer would otherwise hire to do the same work, because that is exactly what it stands in for: an employee that never gets tired and never sleeps, at a fraction of the cost.

OPTION A • A NEW HUMAN HIRE

One back-office employee

A full salary⁺ overhead

Salary, benefits, taxes, tools, space, and management, at whatever it costs in your market.

- ✗ Works about 160 hours a month, one role at a time
- ✗ Sick days, vacation, turnover, and re-hiring
- ✗ Weeks of recruiting and months of ramp-up
- ✗ Slower and more error-prone when tired or busy
- ✗ The knowledge walks out the door when they leave

OPTION B • A SYDEKYK

A whole team of specialists

from \$400_{/mo}

One plan, the full roster, no hidden costs.

- ✓ Works 24/7/365, never gets tired, never sleeps
- ✓ Many jobs at once: AP, sales, hiring, contracts
- ✓ Live in days, no recruiting, no ramp-up
- ✓ Consistent, auditable, and improving over time
- ✓ The knowledge stays, and the roster keeps growing

A fraction of one salary, doing the work of many. For less than the cost of a single part-time hire, your customer gets a tireless team that starts on day one and never asks for a raise. That is what makes the plans on the next page an easy yes.

Three clear plans. You sell them; you earn on every one.

Transparent monthly pricing customers understand instantly. Every plan includes a monthly AI capacity allowance; heavier use is simple metered overage.

SQUAD \$400 /mo The default. For a growing business putting its first AI sidekicks to work. → Full shared roster of Sydekyks → Core Odoo integration → Standard AI capacity allowance → Team seats for everyday users → Email support	MOST POPULAR COMMAND \$900 /mo For teams running AI across finance, sales, and hiring at once. → Everything in Squad, plus: → Higher AI capacity & more seats → All premium Sydekyks & integrations → Workflow automations (Playbooks & schedules) → Priority support	FLEET · ENTERPRISE from \$2,000 /mo For larger organizations that need AI built around their own workflows. → Everything in Command, plus: → 3 Exclusive Sydekyks custom-built and included, more on demand by quotation → Highest capacity & dedicated success → Advanced security & SLA → Custom-scoped pricing
--	--	---

These are the customer's prices, set by you at point of sale

Squad is the entry point; Command is where most customers land; Fleet is where enterprises graduate. Every dollar of it is recurring, and every dollar of it earns you commission on the ladder overleaf.

Enterprise "Fleet" is a floor price, scoped per engagement based on exclusive agents, capacity, and security requirements. AI capacity allowances and seat counts per tier are finalized at partner onboarding.

Recurring commission that climbs to 40%.

You earn a percentage of **all recurring revenue you bring**, every month, for the life of the account. As your book grows past each threshold, your rate steps up across your entire book. You're not starting over each year; you're compounding.

RATE	YOUR RECURRING BOOK (ANNUAL)	TIER
25%	Up to \$20,000 ARR	Starting tier
30%	\$20,000 to \$100,000 ARR	Growth tier
35%	\$100,000 to \$500,000 ARR	Premier tier
40%	\$500,000 to \$1,000,000+ ARR	Elite tier

A worked example, a partner who has grown into the Elite tier:

BOOK OF BUSINESS	MONTHLY	ANNUAL RECURRING
25 customers on Squad (\$400)	\$10,000	\$120,000
40 customers on Command (\$900)	\$36,000	\$432,000
5 customers on Fleet (from \$2,000)	\$10,000	\$120,000
Total book → 40% Elite rate	\$56,000	\$672,000

Your take-home on that book: ~\$268,800 per year, recurring.

40% of \$672,000. It renews every year the customers stay, and it grows every time you add one. This is a book of business you own, not a one-time finder's fee.

Illustrative. Commission tiers are based on total active annual recurring revenue and, once a threshold is reached, apply across your full book. Exact terms, payment cadence, and qualification rules are set in the partner agreement.

The commission is only the recurring layer.

Recurring commission is the engine, but it is not the whole car. Around every Sydekyks deployment sits a band of services that are **yours to price, deliver, and keep**. This is where an implementation partner's real margin lives, and none of it is shared with us.

01 · IMPLEMENTATION

Stand it up

Scoping, Odoo connection, agent configuration, data mapping, and go-live. You own the setup engagement and bill it as a project.

02 · TRAINING

Make them fluent

Onboarding sessions, workshops, and enablement so a customer's team works confidently with their Sydekyks. Repeatable, and easy to package.

03 · SUPPORT

Keep them running

First-line support, managed service, and success retainers. Recurring service income that sits right alongside your recurring commission.

This is greenfield, and you set the prices

There is no established market rate for implementing, training on, or supporting AI agents inside Odoo, because the category is brand new. Nobody has drawn the line yet, so you are not squeezed into someone else's margin: **you decide what this work is worth in your market**. Two profit engines, recurring commission and services you own outright, both on ground nobody has claimed.

It starts with selling. It doesn't end there.

Today the partnership is simple: you sell and support, we build and host, you earn recurring commission. But we're building toward something bigger for partners who prove they can move.

For selected, high-performing partners, from year two

We intend to open the platform to top partners: host your own instance and build your own Sydekyks on our engine, much like Odoo's own partner model. Invitation-only, earned through performance. The partners who build their book now are first in line.

Help us shape what we build next

Founding partners get a direct line into the roadmap: which Sydekyks your market needs, how they behave, which platform we tackle after Odoo. You are not selling a finished product at arm's length; you are helping decide what it becomes.

— GETTING STARTED

- 1 A conversation.** A 30-minute call to see the roster live against a real Odoo and confirm the fit.
- 2 Onboarding.** We enable your partner account and hand you demo environments, materials, and pricing tools.
- 3 Your first customers.** Introduce Sydekyks to your existing Odoo base, the warmest audience there is.
- 4 Grow the book.** Add accounts, climb the commission ladder, and compound your recurring revenue.

Let's plant your flag before the crowd arrives.

The two biggest waves in software are cresting together, in a space nobody owns yet. We've built the product and we carry the R&D. We'd like you to own the market with us as a founding partner, on the ground floor of the AI layer for business software.
